Asliddin Tirkashev

Junior Web Developer

Uzbekistan | RNU student, group 4230Z

GitHub: asliddintirkashev4-cloud | Web portfolio

PROFILE

RNU student developing web applications through The Odin Project. Coursework covers responsive interfaces, React, server-side JavaScript and relational databases.

TECHNICAL SKILLS

Frontend: HTML, CSS, responsive layouts, accessibility, JavaScript, React, React Router

Backend and data: Node.js, Express, REST APIs, PostgreSQL, Prisma, Passport, JWT

Tools and testing: Git, GitHub, Vite, Webpack, Jest, Vitest, React Testing Library, SuperTest

SELECTED COURSEWORK PROJECTS

Commonplace - React Shopping Cart

Built home, shop and cart routes around a live product API. Used Context and a reducer for quantities, persistent cart state and integer-cent totals.

Covered cart actions, filtering and error recovery with React Testing Library and browser checks.

View project

Server Workshop - Node.js and PostgreSQL

Created Express applications for inventory, private files, a members club, a blog, messaging and a social feed. Added persistent data, authentication and role-based access.

Integration checks cover validation, ownership, sessions, CSRF, JWTs, follow requests and private conversations.

View project

Battleship - JavaScript Browser Game

Separated ships, boards, players and turn rules from the interface. Implemented legal fleet placement, computer turns and game-over behavior.

Verified model behavior with Jest and played full win/loss flows in the browser.
